

Loading GPS Map into Google Earth

- Go to your Recon and open, Mobile DLog
- Open your project that you have mapped.
- Click on **Menu / File / Export to Google Earth**
 - A Window will appear telling that that your files were successfully exported.
- Now Copy your data to your Desktop PC

Moving data from the Recon to your desktop computer

1. Plug the Recon into the USB Cable which connects to your PC.
 2. Open Microsoft Active Sync.
 3. Left click on Explore,
 4. Each one of your projects are in its own folder. Find your project / projects and highlight by holding down the Ctrl Key and left clicking on the project / projects that you want to copy to the desktop
 5. Be sure that you pointer is one of the files, and right click, and then left click on Copy.
 6. Now on your desktop right click on the  and left click on Explore.
 7. Double Left click on Local Disk C: /
 8. Double left click on Tile Maps. (This is a folder that you create to store your raw data as a backup)
 9. Now in the white part of the screen right click, and left click on PASTE, be sure that when you right click to paste you are NOT on top of another project.
- Now open the project folder that you were working with and double left click on the KMZ Google Earth file.
 - It will look like : Your Project.kmz
